

The AI Tutor Service

How it Works & Powers Learning

The Student Experience: A 5-Step Journey

From a spoken question to a comprehensive answer, the platform creates a seamless conversational learning flow.

Our Secure & Scalable Tech Stack

The service is built on industry-leading technology for reliability, performance, and security.

Core AI Model

Google Gemini (LLM) for world-class reasoning, explanation, and content generation.

Audio Interface

Advanced Speech-to-Text (STT) and Text-to-Speech (TTS) models for natural interaction.

Infrastructure

Hosted on AWS (Amazon Web Services), providing scalable and reliable server performance.

Data Security

All data is protected by robust Firewalls and AWS security protocols to ensure privacy.

The Core Cost Model

Our model is built on efficient internal costs, allowing us to offer a simple, consolidated price to our customers.

AI Model Token Costs (Per Million)

This chart visualizes our internal cost for base audio models against the consolidated price for all AI services charged to customers.

Customer AI Usage Charge

\$60

per Million Tokens

This single, simplified fee covers the combined usage of the Google Gemini LLM, STT, and TTS models.

Full Charges Breakdown

The table below summarizes all charges, differentiating between one-time/internal costs and the recurring customer-facing price.

Charge Category	Internal Cost (Our Expense)	Price Charged to Customer	Notes
One-Time Charge	Variable (One-Time Fee)	N/A (Billed as project setup)	Covers initial website development.
Server Charge	Variable (Monthly Fee)	N/A (Covered by service fees)	Covers AWS hosting & maintenance.
Content Setup	\$15 USD per chapter	N/A (Billed per chapter)	Fee for integrating new content.
AI Model Charges	\$12 / million tokens (STT & TTS only)	\$60 / million tokens (All models)	The primary usage-based charge.
